

PELCO SYSTEMS INTEGRAL PART OF MEXICO CITY REVITALIZATION

“Pelco video surveillance equipment is an important part of the wider public safety campaign in some of the most high-profile visitor sites around the city. And Pelco is proud to be play a role in Mexico City’s urban restoration projects.” – Brent Douglas, Crockett International, Latin America

MISSION

With 20 million residents, Mexico City is one of the largest and most diverse cities in the world. To keep pace with this growth and, at the same time, maintain a strong profile as a major international player for business and tourism dollars, Mexico has undertaken significant measures to renovate and invigorate the city’s historic areas, making them safer, cleaner, and more aesthetically appealing.

SOLUTION

At the heart of Mexico’s campaign, Pelco’s camera and control systems play an important role. The installation of Esprit and Spectra Positioning Systems on the streets and buildings of this historic city is widely viewed as a major contribution to its renaissance and revitalization. By protecting historic landmarks, providing a safe environment, and utilizing the latest technological innovations, Pelco equipment aids Mexico’s efforts to increase the local economy in and around the capitol.

Several hundred Pelco Spectra III integrated dome positioning systems are installed throughout the Valley of Mexico. Whether atop poles at busy intersections, on corners of buildings near important tourist areas, or mounted high above the tiled roofs, domed cupolas, or stone facades in the historic district, Pelco systems are a vital component in reducing crime and supporting local law enforcement personnel.

RESULT

Showcased in local papers and television news programs, authorities continue to praise the installation of the Pelco video security systems as a major force in reducing crime and corruption on major streets and intersections throughout the city. It has been so successful, in fact, that news outlets gave the public an “up close and personal” look at the downtown video control center where operators used the Pelco System 9760 Video Matrix Switch system to select and maneuver some of the 170 Spectra and Esprit cameras installed around the city.
