Pelco and Feeling Software Team up with latest Product Integrations – Will Showcase New System Integration Model this Summer at École Polytechnique de Montréal

Clovis, CA and Montreal, Quebec, Canada (June 22, 2010) – Pelco and Feeling Software announced today the integration of the Pelco Endura Video Management System with Feeling Software’s next generation Omnipresence 3D and iGuard products. The Omnipresence 3D Security Platform, an advanced visual Command & Control application, may now be seamlessly deployed to any new or existing location where Pelco Endura is installed. According to Pelco officials, this new integration further demonstrates the continued commitment by Pelco to openness by providing best-of-breed solutions that meet today’s security professional’s needs.

An integrated system including Endura, Omnipresence 3D and iGuard Mobile Surveillance is currently being deployed at the École Polytechnique de Montréal, a university with 6000 students in Montreal, Canada. The deployment is scheduled for completion in summer 2010 and will enable the university to effortlessly monitor and control nearly 400 cameras.

Feeling Software’s Omnipresence 3D platform makes it simple to understand all surveillance video feeds at a glance to maximize the effectiveness of your entire video security solution. Omnipresence provides the context needed to understand massive amounts of visual information created in an enterprise-class surveillance system.

With the addition of an off-the-shelf iGuard server to any Endura system, security guards and managers may now access both live and archived video feeds directly from smart phones and PDAs, including Apple’s iPhone and iPod Touch devices. This creates a mobile control center to enhance overall facility security and deter crime.

Pelco Endura is an open, scalable IP video surveillance solution for recording, display, and management of unlimited standard resolution, HD, and megapixel cameras. Designed for the demands of professional IP video surveillance, Endura guarantees performance while optimizing total cost of ownership. Through the optimization of software running on Pelco-produced COTS hardware and patented technologies such as EnduraStor and EnduraView, Endura allows operators to extract the optimum benefit from today’s megapixel cameras while keeping system costs under control. It has proven very effective where performance, system flexibility, and large-scale video solutions are needed.

“We are pleased once again to partner with Feeling Software, a member of the Pelco Partner First Program. This newest integrated solution combines the strengths of both platforms, providing our mutual customers with added flexibility, performance and superior quality,” says Dave deLisser, Pelco Director of Integration.

“Pelco is a member of Feeling Software’s Technology Partner Program and we are pleased to work with them to create this new HD video surveillance solution,” says Christian Laforte, President of Feeling Software. “Feeling Software’s open platform design makes it easy to integrate into existing open enterprise-class systems.”

About Pelco

Pelco, Inc. by Schneider Electric is a world leader in the design and development of video and security systems ideal for any industry. Pelco produces the industry’s most respected offering of discreet security camera domes and enclosures, video matrix systems, virtual matrix, VMS, next-generation DVRs, Full HD LCD displays and megapixel cameras, IP cameras, other IP/IT solutions – and much more.
