

Endura & Automated Video Management

BY CAREY D. SCHOCK, MANAGING EDITOR

By integrating Insight Video Net's Central Management System (CMS Flex) with the Pelco Endura Video System, the collection of video and other digital assets helps streamline security operations and significantly reduces the amount of time needed to manage even the most complex security systems.

Pelco's continuing commitment to open standards is a core pillar – and unique strength – of our ability to deliver a higher definition of security. A key facet of this approach is the partnerships and strategic alliances we have developed to enhance our product offering and deliver the robust features and capabilities that today's security professionals demand.

Recently, Pelco and Insight Video Net have combined forces to integrate video security and the tools necessary to collect video and other digital assets. The result is a solution that can be configured to meet individual customers' unique requirements, while maintaining the highest security and integrity of valuable and oftentimes confidential and/or proprietary information.

While the Endura Video System can manage and record incredible amounts of video from numerous locations, retrieving all of that data can be consuming and costly both in terms of storage and human resources. The integrated Pelco-Insight Video Net solution allows security professionals to pull together all these important files to be automatically managed at either a centralized or distributed location(s), empowering the user to piece together a digital story of what occurred during the timeline of events.

CMS Flex allows users to assign value to video files by what's most important – the event. Based on customer-defined criteria, CMS Flex determines where event video is stored, how long it's saved, whether it's backed up and who can access it. And this is all done automatically and with the highest security ensuring its admissibility in court.

Importantly, CMS Flex employs a highly secure audit trail called DigitalProof™ that allows businesses to see what has occurred throughout the life of a file, making it easy to determine who has accessed a file, where and when it was viewed and whether it was exported.

Pelco provides a perfect framework for Insight Video Net's CMS Flex software, which automatically manages video from the Endura Video System with all of the powerful automated features, security, and reliability that security professionals demand.

Don't just collect video, automate your video event management

Targeted Industries

Ports, Gaming, Public Safety, Transportation, City Surveillance, Campus Environments, First Responders, Mining, Oil & Gas, Remote Installations, Heavy Industrial, Commercial

Customer Benefits

- Best-of-Class Hardware & Software Solutions
- Streamlined Security Operations
- Highly Secure Video Management Processes
- Complete Solution for All Video & Other Digital Assets
- Wireless Video Security for Mission Critical Applications
- Flexible, Scalable, and Reliable for Enterprise-Class Installations
- Improved Process Management & Organizational Efficiencies
