

Integration of NICE Situator™ & Pelco Endura AND DX8100 Series

BY CAREY D. SCHOCK, MANAGING EDITOR

The power of integration is found in the realized benefits that multiple systems working together can provide to the security professional. This is why Pelco is a committed open systems provider. And this is exactly the case with the integration of NICE Situator™ Situation Management Solutions and Pelco video management systems.

Imagine for a moment an incursion along a fence line of a multi-facility campus spread over tens of acres. Responsible for the complex's security, what is your next move? With an integrated

NICE Situator-Pelco solution, security professionals like you have the actionable information necessary to make the right decision, deploying the most efficient and logical resources.

Back to our incursion, With NICE Situator, a pre-defined alert message is sent to the security center. The relevant GIS map visually details from where the alert is coming. But what is actually happening on the ground? The integration of NICE Situator with Pelco video management systems, including Endura 1.0 and DX8000/8100 Series DVRs, integrates otherwise siloed systems. Now, for example, the facility's perimeter detection system seamlessly works in conjunction with Pelco video systems so that when the fence is "tripped" the relevant video feeds are displayed for the operator. Simultaneously, based on pre-programmed governing rules, NICE Situator sends task assignments to additional stakeholders best able to respond. And this is just one such example.

The Integrated Solution

The NICE Situator-Pelco integration enables organizations to employ an endless number of video surveillance technologies as a single, tightly integrated situational awareness system, without adding new hardware, and with the ability to view and control from video and other services from a single console. NICE Situator fully integrates with the enhanced digital video recording capabilities of the Pelco Endura Network Video

System as well as with DX8000 and DX8100 digital video recorders, resulting in the realization of the full benefits of a Situation Management solution with digital video recording capabilities.

Already, the integration has been successfully implemented in a number of projects, in the U.S. "This powerful integration is the

result of a close development relationship with Pelco," explains Assaf Kalderon, responsible for NICE Situator-Pelco integrations. "Customers can now realize the strategic benefits and rest assured that Pelco's

latest video management platforms and advancements in camera technology will be continually integrated into the NICE Situator architecture."

About NICE Situator™

NICE Situator™ is a comprehensive Situation Management software platform that enables situation planning, response and analysis for the security, safety, and crisis management markets where the risk of human error can lead to financial loss, injury, and damage to public image.

The NICE Situator Situation Management Solution was originally developed by Orsus. Following its acquisition by NICE, please direct all inquiries regarding Situator to Yohai West. He can be reached at yohai.west@nice.com.
