Seamlessly Integrating Video Analytics

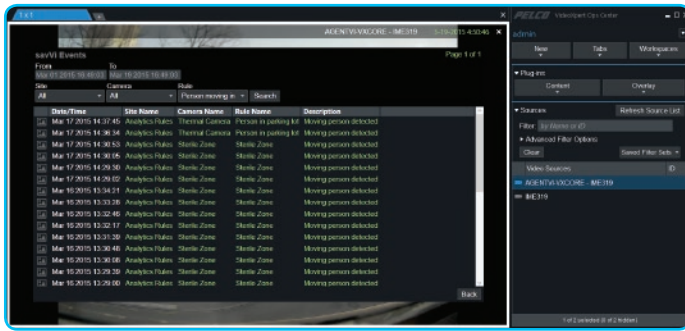

Whether you are expanding an existing surveillance solution or deploying analytics capabilities for the first time, VideoXpert's integration with Agent Vi provides a seamless solution. savVi is Agent Vi's video analytics software which provides analytics functionalities through a single, easy to use platform that integrates with existing or new surveillance systems.

The integration with savVi enables the VideoXpert platform to receive, display and manage real-time events. Additionally recorded video can easily and quickly be pulled from VideoXpert for forensic analysis and business intelligence purposes.

Learn How » Pelco.com/VideoXpert

At a Glance

- Automatically detect security and safety breaches and manage the real-time alerts generated by Agent Vi through a single user interface
- Full event management through the VideoXpert Ops Center, including video playback of events
- Rapidly analyze, locate and retrieve video stored by VideoXpert, replacing manual video review
- Effortlessly extract statistical data from surveillance video to inform operational decisions

Agent Vi VideoXpert Driver

Fully integrated with Pelco's video recording and management platform, Agent Vi's VideoXpert Driver allows savVi's full range of video analytics capabilities on every camera connected to the surveillance system through VideoXpert.

Agent Vi Ops Center Plugin

savVi's real-time event detection capabilities seamlessly integrates with VideoXpert via the Ops Center Plug-in, which allows the user to view partner video through VideoXpert's user interface.

The integration with Pelco VideoXpert Ops Center enables full event management through the Ops Center. This includes event notification, information and snapshot and more.

Features

- Transform your video surveillance system from a passive tool to a proactive detection system by offering real-time event detections, enabling rapid responses to incidents, as they emerge
- Replace labor-intensive manual video searches with automated video analysis, enabling rapid access to specific video segments buried in your stored video
- Search through 24 hours of video in a few seconds, using parameters such as target or event type, color, size, similar targets and more
- Review search results via video playback thumbnails, a condensed summary clip, and more
- Extract statistical data including traffic volumes, movement trends and motion patterns from your surveillance video, enabling effortless business intelligence analysis
- Purchase of AgentVI's suite of algorithms is required

Features

- Detects a wide range of events related to people, vehicles and static objects
- Analyzes video from multiple sources including fixed, PTZ, thermal and panoramic cameras
- Displays list of recent events with associated video
- Presents screen shot and data overlay of most recent event for associated camera
- Enables efficient search, sort and filter through list of analytics events
