

Esprit Enhanced Pressurized PTZ

ADVANCED PRECISION IN ANY ENVIRONMENT

Esprit Enhanced Pressurized PTZ delivers rugged, pressurized coverage for bridges, highways, seaports, airports and industrial plants where rain, spray and dust can cloud lenses. It helps teams maintain clear views and wide-area awareness when the weather turns harsh.

PRESSURIZED FOR HARSH WEATHER

Get clear views in harsh weather as dry nitrogen pressurization, heater, defroster, wiper and sun shroud work together to limit fogging, condensation and buildup on exposed sites.

LONG-RANGE HD IMAGING

Capture key details along pipelines, perimeter fences, bridges and urban corridors with 1080p imaging, 30x optical zoom and 12x digital zoom from a single camera.

FLEXIBLE ILLUMINATION OPTIONS

Match illumination to each site by choosing IR, IR plus white light or no illumination for discreet viewing or visible deterrence across yards, terminals and access roads.

RESPONSIVE PTZ PERFORMANCE

Track activity smoothly with 360° continuous pan, above-horizon tilt, low-latency control, image stabilization and defog that keep images usable in wind, rain and fog.

ANALYTICS ON THE EDGE

Reduce manual monitoring with built-in analytics, including AutoTracker and object behaviors, that detect loitering, stopped vehicles and other events around critical assets.

OPEN, FLEXIBLE CONNECTIVITY

Simplify system design with built-in fiber and dual SFP ports for long runs, while ONVIF conformance enables easy integration with leading VMS platforms.
