

Spectra Professional 2 Series

COST-EFFECTIVE, WIDE-AREA PROTECTION

Spectra Professional 2 Series PTZ helps optimize security for campuses, commercial sites and public spaces with broad 360° coverage from fewer cameras. Built-in analytics and smooth control help operators detect events faster, track activity and investigate incidents.

360° SITE COVERAGE

Keep large areas in view with continuous pan, tilt and 30x zoom, helping teams see activity across scenes, reduce blind spots and cover more ground with fewer cameras.

COST-EFFICIENT DEPLOYMENT

Lower total system cost with one camera that covers wide areas in place of multiple fixed units, with pendant and in-ceiling models plus flexible power options for new builds or upgrades.

INSIGHT INTO CRITICAL EVENTS

Act faster on real events with Pelco Smart Analytics that detect loitering, motion, object counting, camera sabotage and audio events, alerting staff when activity needs attention.

CLEAR IMAGING IN TOUGH LIGHT

Maintain usable footage with full HD imaging, wide dynamic range and low-light performance that reveals detail in entrances, corridors and outdoor areas with glare, shadows or poor lighting.

RUGGEDIZED DESIGN

Use in exposed locations with IK10 impact resistance and weather ratings suited to building exteriors, car parks and open walkways in rain, wind and vandal-prone areas.

OPEN, FLEXIBLE INTEGRATION

Simplify system design with ONVIF conformance for easy integration with leading VMS platforms, helping you reuse existing infrastructure while protecting devices and data.
