

Spectra Professional IR 2 Series PTZ

CLEAR DETAIL IN LOW-LIGHT ENVIRONMENTS

Spectra Professional IR 2 Series PTZ helps protect campuses, stadiums, transport hubs and mixed-use sites where lighting is limited or controlled. It combines wide-area coverage with long-range IR and look-up tilt, exposing hidden threats so security teams can respond faster.

EXPANSIVE COVERAGE

Expand coverage of plazas, intersections and concourses with 360° views and a +15° look-up tilt that let teams see elevated walkways, overpasses and stands from a single camera.

LONG-RANGE IR ILLUMINATION

See deeper into dark areas with built-in IR up to 150 m, giving usable views of paths, stands and parking zones where visible lighting is limited, regulated or unwelcome.

CLEAR IMAGING IN TOUGH LIGHT

Keep scenes usable in mixed lighting so faces, vehicles and signage stay clear, even when bright highlights, deep shadows and low-light areas appear in the same frame.

INSIGHT INTO SUSPICIOUS ACTIVITY

Act faster on real events with Pelco Smart Analytics that detect motion, sabotage and other behaviors, alerting staff when activity needs review instead of watching screens nonstop.

OPEN, FLEXIBLE INTEGRATION

Simplify system design with ONVIF conformance for easy integration with leading VMS platforms, helping you reuse existing infrastructure while protecting devices and data.
