

Motorola Solutions Plugin for Autodesk® Revit®

Streamline your security design processes

Design secure environments with the Motorola Solutions Plugin for Autodesk® Revit®. Browse Pelco's entire catalog and choose from a wide-range of open platform security cameras, visualize your designs in 3D and specify accurate security solutions for customer's diverse needs.

3D view generator

Streamline your design process with 3D views that accurately reflect the camera perspectives. These views are saved and updated automatically as your cameras move during the design process.

Obstruction detection

Prevent blind spots and maximize physical security coverage by checking for obstructions such as walls, lights and columns in your camera's field of view using Revit's 3D functionality.

Product selector

Find the right Pelco cameras for your project with our product selector. Browse the entire portfolio and easily import camera models that meet your specific requirements.

Camera options

Choose from a wide-range of intelligent, open platform Pelco cameras and quickly set up your imported camera.

Camera target distance

Ensure accurate planning and optimal camera placement for your security needs by calculating pixels per foot/meter and target distance for any camera.

Camera schedule creator

Create a dynamic security schedule tailored to your specific needs. Choose from a comprehensive list of parameters or create your own.
