

Pelco and SecuriThings integration

Physical security device management

A unified solution that consolidates, automates and secures your connected Pelco devices.

Maximize the value of your physical security system with the seamless integration of Pelco and SecuriThings. This software-only solution empowers organizations to proactively manage their security environment from one place, providing real-time visibility and control over Pelco devices and other IoT devices at scale.

Once deployed, SecuriThings delivers comprehensive risk detection, predictive maintenance and automated operations for your Pelco cameras and other integrated devices, all from a single pane of glass. Real-time availability monitoring, robust cybersecurity protection and comprehensive compliance reports and visualizations to meet regulatory requirements are benefits of connecting SecuriThings to your current security ecosystem.

Maximize system availability with proactive maintenance and streamlined operations, leading to significant cost savings. By embracing this powerful integration, you can empower your security teams, optimize your security investments and create a more efficient and safer environment.

About SecuriThings

Founded by leading security and IoT experts, SecuriThings empowers operations and IT professionals to automate the management of physical security devices, while also ensuring full compliance and security within their organization.

The solution is trusted by Fortune 100 companies and has been deployed across large organizations in various industries including tech, manufacturing, finance, airports, logistics, higher education, healthcare and more.
